

*T&S Machines and Tools' XI2000 model seat and guide machine offers 2" more height and 10" more length for high performance work. This allows users to cut two heads in the same setup and all seats to the same exact depth.*

*Newen's EPOC-XI is a state-of-the-art fixed turning seat and guide machine. The automatically balanced machining head forms one body with precision spindle movements on its own axis.*

*Sunnen's VGS-20 seat and guide machine can handle everything from big diesel heads to subcompacts.*

*Peterson TCM/V 25 valve guide and seat machine's 360-degree rotation air table allows effortless cutting of seat angles with the tri-cut, 3-angle tooling.*
